

## ABSTRACT

### Forehead Support for Facial Mask

5 A forehead support (10) is disclosed that is adapted to be secured to a  
respiratory mask (16). The forehead support (10) including a joining member (14) for  
securing to the mask (16) and a cushion frame (12) pivotally mounted to the joining  
member (14). The cushion frame (12) is adapted to locate one or more forehead  
cushions (25). The cushion frame (12) is also adapted to pivot relative to the joining  
member (14). The cushion frame (12) is also selectively lockable at two or more  
10 predetermined angular positions relative to the joining member (14).

A respiratory mask assembly comprising a respiratory mask (16) and a  
forehead support (10) adapted to be secured to the mask (16) is also disclosed.
